

**Notice of Intent to Issue a Request for Proposals  
EML 2022 Fall Renewables RFP**

**9/29/2022**

Entergy Mississippi, LLC (“EML”), hereby provides notice to interested parties that it intends to issue a Request for Proposals for Renewable Generation Resources (the “RFP”). EML expects to post RFP documents as early as November 2022. Bidder registration for the RFP is anticipated to take place in January 2023. Interested participants should monitor the RFP website <https://spofossil.entergy.com/ENTRFP/SEND/2022EMLFallRenewablesRFP/Index.htm> for information about the posting of RFP documents and bidder registration.

Through the RFP, EML would seek to procure approximately 500 megawatts (AC) (“MW”) of renewable resources that can provide cost-effective energy supply, capacity, fuel diversity, and other benefits to EML’s customers. Resources would be procured through a combination of power purchase agreements (“PPA”), build-own-transfer (“B-O-T”) agreements, or self-build or affiliate resources. The delivery term for a PPA arising out of the RFP would be a minimum of ten (10) years and a maximum of twenty (20) years, with an interest in fifteen (15)-year or shorter delivery terms. Only solar photovoltaic (“Solar PV”) and wind turbine (“Wind”) resources would be eligible to be offered into the RFP. The minimum electric generation capacity in any proposal offered into the RFP would be 50 MW. EML reserves the right to acquire more or less capacity than the above stated amounts.

Resources proposed for the RFP, whether Solar PV or Wind, would be required to be physically located within the EML portion of Midcontinent Independent System Operator, Inc. (“MISO”) and directly interconnected to the EML transmission system. Bidders in the RFP would be permitted to submit proposals for eligible Solar PV or Wind resources that have a fully executed Generator Interconnection Agreement (“GIA”) or are active in the MISO Definitive Planning Phase (“DPP”) 2021 Cycle studies or an earlier DPP study. Resources that lack an executed GIA and are not included in any of these DPP studies would be ineligible to participate in the RFP.

The guaranteed substantial completion date for a B-O-T transaction and the guaranteed commercial operation date for a PPA transaction (both of which may be extended for qualifying force majeure events) would be no later than May 31, 2027. Any RFP schedule or resource location question should be directed to the Bid Event Coordinator (see the final paragraph below).

Proposals would be allowed to include a separately priced option for a battery energy storage system (“BESS”) to supplement the energy delivery capabilities of the Solar PV or Wind resource.

The RFP will include the consideration of self-build options submitted on behalf of EML or proposals submitted by Entergy Regulated Affiliates and Entergy Competitive Affiliates. The self-build option(s) and/or Affiliate proposals will be considered and evaluated as an alternative to third party proposals submitted in response to the RFP.

Any transaction emerging from the RFP would be subject to EML’s receipt of all regulatory approvals on terms acceptable to EML in its sole discretion and other conditions precedent to the transaction.

The registration process contemplates that Bidders would be required to register each proposal with EML and pay a proposal submission fee of \$10,000 per proposal in advance of the RFP's proposal submission period. Any alternative proposal submitted into the RFP (e.g., a proposal containing alternative pricing or an alternative transaction structure) would be required to be registered as a separate proposal. A bidder that offers a proposal that also includes a BESS proposal would be required to pay an incremental charge of \$1,000 for each BESS option offered. Any Solar PV or Wind resource selected by EML in the 2022 Request for Proposals for Renewable Resources for EML issued on January 25, 2022, will be considered an ineligible resource and any proposal based on such resource will be non-conforming and eliminated from consideration in the RFP.

Bidders are advised that various rules, regulations, and other laws apply to the development of new-build Solar PV and Wind projects in Mississippi. Bidders may be required to demonstrate to EML that it has timely obtained, or has a satisfactory plan to timely obtain, the licenses and other authorizations required under such laws to submit its proposal(s) in this RFP or to perform its obligations under any resulting contract with EML.

All dates and time periods referenced in this notice are subject to change. This notice is intended in part to give prospective bidders interested in participating in the RFP advance notice of the RFP. While EML expects to issue the RFP, by publishing this notice EML is not assuming, and expressly disclaims, any obligation or commitment to issue the RFP, or any other obligation or liability of any kind of EML that could result from or arise out of this notice.

EML has engaged Mr. Brandon Meyer of Entergy Services, LLC, to serve as the Bid Event Coordinator and Mr. Wayne Oliver of Merrimack Energy Group, [MerrimackIM@merrimackenergy.com](mailto:MerrimackIM@merrimackenergy.com), to serve as the Independent Monitor for the RFP. Questions about this notice or registration to participate in the RFP should be directed to the Bid Event Coordinator at [EMLRenewablesRFP@entergy.com](mailto:EMLRenewablesRFP@entergy.com).
